

# PLRBusinessDepot.com Simplified User's Guide

Thank you for downloading the PLR Business Depot Websites. Each website on PLRBD package comes with two (2) types of file formats ie. [HTML](#) and [XSP](#) extensions for your convenience. So, not only the Deamweaver or MicrosoftFrontPage users will benefit from these websites but also the fast growing XSitePro users.

Please don't be intimidated by those "tech" words, we've tried our very best to hand you a turnkey website that you can launch literally in few minutes.

Files may vary depending on your acquired license, If you owned a PLR license of this product then you should have the following files after unzipping:

1. **Website**
2. **Source File (Not Available in MRR License)**
3. **XSitePro**
4. **WP Theme**
5. **eCover**
6. **PLR License**
7. **PLR terms**
8. **The PDF File**
9. **User's Guide**

## I. Editing The Website:

If you are planning to sell the product that comes with this package then you should do these very important steps. Before you upload your website to your server make sure that you add your "[Payment Button](#)" on the order page so people can pay before downloading the product and the download page where buyers can download the product after the successful payment.

**There are 3 very important pages that you need to edit:**

1. Order Page – default file name ([OrderNow.html](#))
2. Thank You Page – default file name ([MyThanks.html](#)) *(Don't forget to rename this)*
3. Resource Page – default file name ([Resource.html](#))

### I.a Order Page

Depending on the merchant you are going to use, payment button setup may vary but I'm pretty sure that each of them has its own user's guide that you can follow.

Let's assume that you will be using Paypal as your payment processor since it's the very popular and convenient to use both for sellers and buyers.

We've included a very cool and useful tool that you can use on changing the payment button that can be found in the download area called "[Paylock Generator](#)"

**Note:** If you are using the XSitePro version of the site then, you won't need this as XSP has its own built-in Paypal payment generator.

**Paylock Generator**, it is very easy to use, you do not need to login to your Paypal account to setup your payment link. However if you are comfortable logging on to your Paypal account to create the payment button that's also fine, both method will works anyways.

Just see below screen shot.

Remember you are not limited to Paypal only, you can also use other payment modules such as Clickbank, Paydotcom.com, 2CheckOut and much much more as you wish.

## I.b Thank You Page

Do not forget to edit your “**thank you page**” as well, by putting the download link of the product. You can also monetize your thank you page by putting some affiliate offers related to your niche.

## I.c Resource Page

Aside from this website's own unique product, it also comes with a resource page wherein your customers can browse Clickbank products as well. Your prospective customers might not like your product for some reasons, so, why not offer them products by others instead.

By default, we included a snippet from a third party service called [CBPro Ads](#) wherein they serves Top **Clickbank's products with images related to this product in autopilot**, all you need is to register to their website for free to get your own tracking code. Creating an account with [CBPro Ads](#) is free but they do have paid options wherein you will benefit more as a user but of course it is not mandatory, you may upgrade your free account anytime. Open you own account here [CBPro Ads](#)

**Make sure that you change the default "Members ID" with your own Members ID to ensure that the sales will be credited to you.**

Using your html editor, change the view into **"code"** to change the existing code with your own code. If you are using FrontPage it is most likely on the bottom left of your screen.

## II. Uploading The Files To Your Web Host:

Assuming that you already have a web hosting account, you can either upload it to sub domain, sub-folder or a top level domain you decide using your favorite ftp program. Just in case you don't have one you can get it here for free : <http://www.smartftp.com/download/> again it's free.

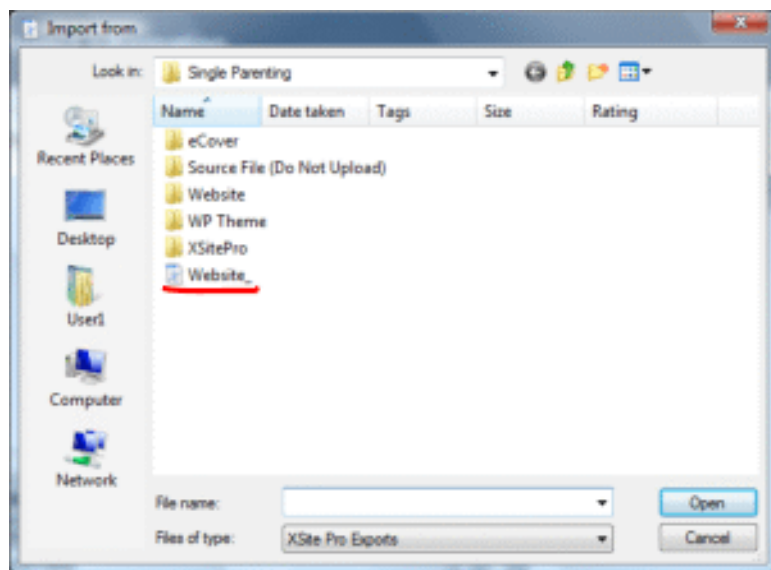

Just open the "Website" folder and upload all the files contained on that folder. Done!

**Need Reliable Webhosting For Your Websites?** Below are the top webhosting companies offering superb services based on our own experience. We highly recommend these webhosts based on the technical and usability of the server interface.

	WEB HOST	PRICE	CURRENCY	DISK SPACE	BANDWIDTH	SETUP	FREE DOMAIN	SCORE	VISIT SITE	UP TIME
1		\$7.95		unlimited	unlimited	Free	Yes	94%		98%
2		\$4.83		unlimited	unlimited	Free	Yes	92%		97%
3		\$4.95		unlimited	unlimited	Free	Yes	91%		97%
4		\$4.95		unlimited	unlimited	Free	Yes	90%		96%
5		\$4.95		unlimited	unlimited	Free	Yes	86%		96%

We can also edit and upload your site to web hosting of your choice for as low as \$15 per website, just contact us via our help desk by [CLICKING HERE](#). You will need to provide us your ftp access so we can install your website.

### III. Editing The Site Using XSitePro2

As requested by our loyal customers we included **.XSP** file format where you can edit the whole website by just importing 1 file to your XSitePro software.

If you are an XSitePro user then you've probably knew already how to import existing website to your XPS program. If not, then XSitePro has a very extensive user's manual were you can access by just clicking the help button inside the software interface.

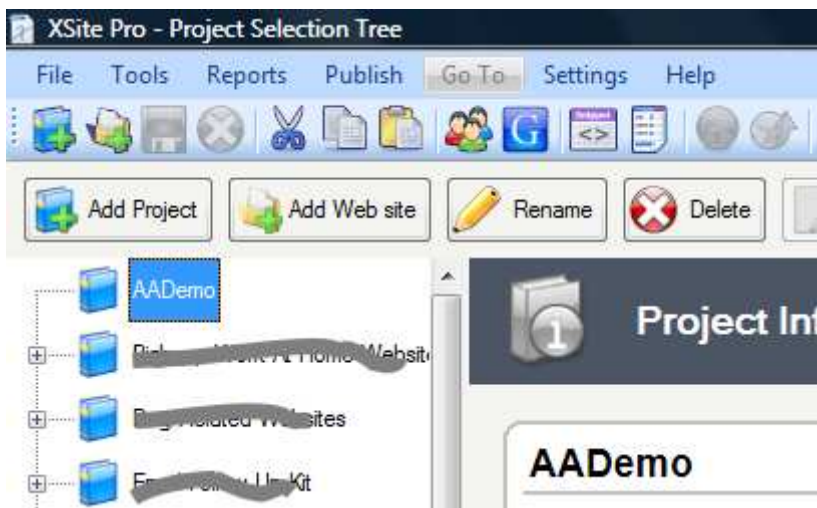

Also, the current XSP file is created with XSitePro **V 2.130**, if your current XSP software version is lower than this version,

then you cannot open the file. Go and upgrade your software to the latest version available.

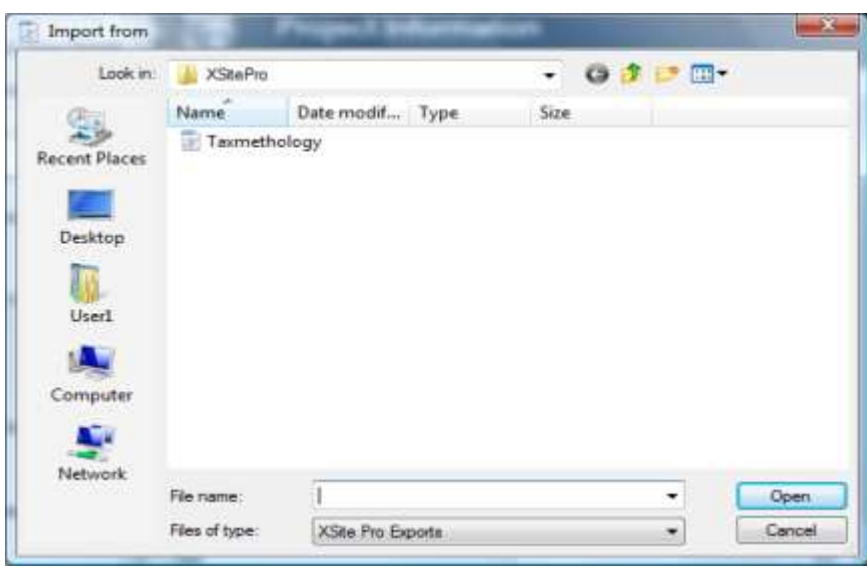

Don't have XSitePro yet? Grab your own copy of [XSitePro2 Here](#).

## Here's A Brief Tutorial On How To Import Your XSP File:

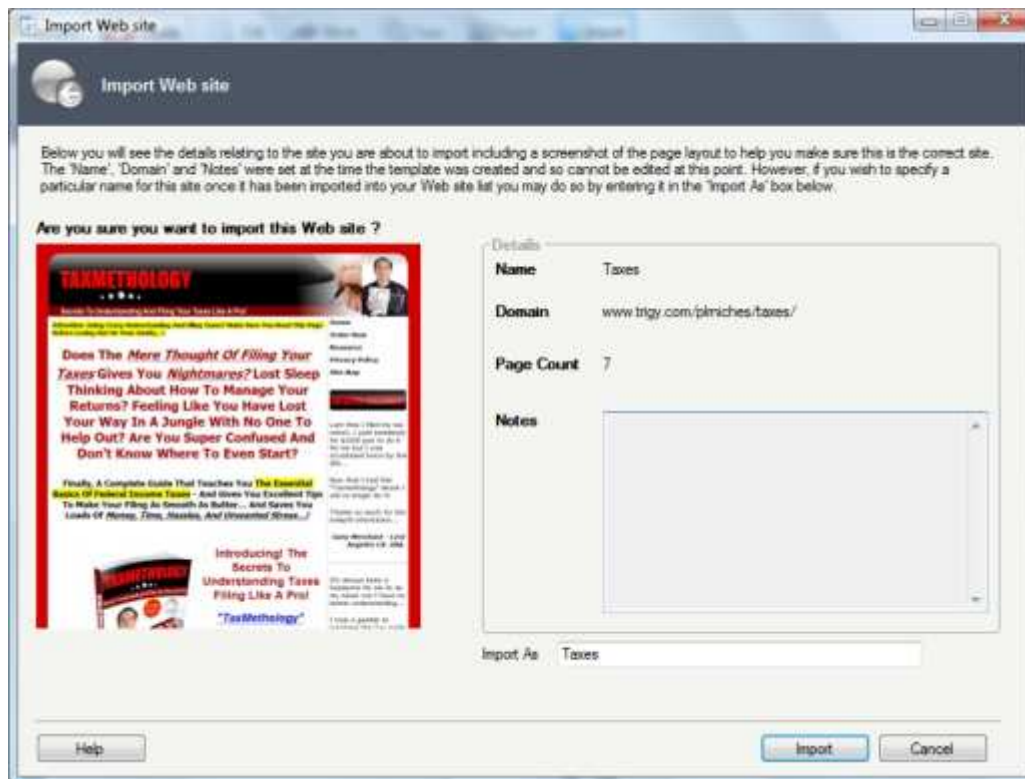

On your XSitePro program you may need to create a new folder where you can store the newly import XSP file. For the sake of this tutorial I created a folder named **“AADemo”** as shown on the screenshot below. You can do this by hitting the **“Add Project”** button.

Right Click that folder and click on **“Import”** tab a new window will pop up like the screenshot shown below from there you can browse the file which we provided.

Now, all you need to do is to highlight the file you wanted to import then click **“Open”** a new window will pop up again as shown on the screenshot below it shows the preview of the website you just imported.

**Congratulations!** You've just successfully imported the file on your XSitePro, you may now edit the website as you wish.

#### IV. Editing The Ebook Source Code

Please note that this portion of this instruction applies only to PLR (Private Label Rights ) License holder of the product, if you only have MRR (Master Resell Rights) License then this does not applies to you.

The source code is on a .Doc format or widely known as Microsoft Word. You can edit this to your liking, in fact we encourage you to customize these and change all the affiliate links with your own links so you can earn more.

When done with the editing, tweaking and all necessary stuff make sure you print it on PDF format before distributing so people cannot edit or alter your ebook.

**Note :** Please **DO NOT** upload the source file on your server keep it in a safe place so you can tweak it in the future.
